QGIS Application - Bug report #5135
Spurious "Password" field in some GRASS modules

2012-03-08 01:28 AM - Paolo Cavallini

Status:	Closed		
Priority:	Low		
Assignee:			
Category:	GRASS		
Affected QGIS version:	master	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	worksforme
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	14893

Description

Recently in the interface of the following modules:

v.in.ogr.qgis
v.in.ogr.qgis.loc
r.in.gdal.qgis
r.in.gdal.qgis.loc
r.external.qgis

a new option, grayed out (Password) has appeared.
The only difference I see is:
 <file key="input" /> [no password]

 <gdal key="input" /> [password]

This happens both with GDAL 1.7 and 1.9

It is still there for me - I admit it is not a serious issue, but annoying nonetheless.

What's the problem with it? You can enter a password, if you select a postgres layer without given password - otherwise it's disabled.

OK, got it: it is useful to add a password for database layers. It is OK as it stands. Thanks.
