Pull Request or Patch supplied:		Resolution: invalid
Easy fix?:	No	Copied to github as #: 15062
Description Point Sampling Tool takes a long time to complete for a large nb of points (~20000) and many layers (~8). I note that the status message is updated for each point and for each field or layer. Perhaps this input/output operation slows down the processing a lot. Could you try not to update the fields at all and perhaps update the nb of processed points at steps of 100? (could not find a subproject for Point Samplin Tool in https://issues.qgis.org/projects/qgis-user-plugins) Agus
