

QGIS Application - Bug report #5407

MSSQL Server - tables are invalid layers for Build 116

2012-04-18 10:40 AM - Carlos da Ponte

Status:	Closed	
Priority:	Normal	
Assignee:	Tamas Szekeres	
Category:		
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 15073
Description		
<p>All tables imported fine using build 115. Updated to build 116, tried to import the same layers and all (~20 layers) yield error msg - "dbname='XX' host=XXX,1433 user='synergy' password='XXXXXX' srid=3005 type=POINT table="dbo"."site" (geolocation) sql= is an invalid layer and cannot be loaded"</p>

This is a problem with the host name getting passed to the provider. Tamas is working on a fix.

As a workaround you can create a ODBC DSN and use it. It still workes correctly with a DSN.
