| Hi,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                        |                                     |
| The actual version of QGIS's master has trouble using the "--configpath" boot parameter.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                        |                                     |
| If you set C:\\OSGeo4W\\bin\\qgis-dev.bat --configpath D:\\SIG\\qgis\\ as the path for QGIS to look at and store all its configuration and cache files, when you try to install a new plugin QGIS will reports the following error (it's looking everywhere, except the configpath) :                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                        |                                     |

**Revision 19e2286b - 2012-05-21 04:57 PM - Jürgen Fischer**

fix #5544

## History

**#1 - 2012-05-15 07:34 AM - Jean-Roc Morreale**

I redid a try on Windows 7 and 1.8.0-Lisboa Lisboa, 3874b10

I deleted the previous qgis folder so the app would create a brand new one at the indicated path (it created ./gdal\_pam/, ./python/ & qgis.db).

When installing a new extension, the error reported is the same as previous. I'll make a try on linux to see if it is the same behaviour.

**#2 - 2012-05-15 01:11 PM - Jean-Roc Morreale**

I tried on linux (fedora 17) with qgis master, same problem.

**#3 - 2012-05-16 06:39 AM - Andreas Neumann**

- Target version set to Version 1.8.0
- Priority changed from Normal to Severe/Regression
- Category changed from Python plugins to Project Loading/Saving

I think this should be a blocker. Several organizations rely on this feature in their more complex setups. In my opinion it is unacceptable to release a new version with such a bug if a feature worked before in a previous major release.

**#4 - 2012-05-17 02:30 PM - Jürgen Fischer**

- Status changed from Open to Closed

Fixed in changeset commit:"ed0cb5d468d56e4977c9e47bb9cb8852a74f87d0".
