**Description**

When adding a new postgis Theme in version 1.7.4 all works fine. In this version the themes are black and I able to click some and add them into my project.

In 1.8.0 (RC1) (OSGEO4W - installation) the tables with an geometry column stay gray untill QGIS has analized what kind of geometry is stored in the table. If you have a lot of themes and like to add the last theme it takes too long to wait for. It should be better to let them clickable and do the analyse only if you like to add the table into your project (like in version 1.7.4)
