

QGIS Application - Bug report #5752

Customisation framework widget tree parser fails

2012-06-06 02:52 PM - Tim Sutton

Status:	Closed	
Priority:	Normal	
Assignee:	Radim Blazek	
Category:	Customisation Framework	
Affected QGIS version:	master	Regression?: No
Operating System:	Linux (Ubuntu)	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 15258

Description

I'm trying to generate the widget tree for the release but it fails with:

I dont think it is a blocker. I updated already the resources/customization.xml after feature freeze in commit:5a4412a21d and since then just a single typo in a label have changed (which was also fixed in commit:78701d8fb40).

#3 - 2012-06-07 12:07 AM - Radim Blazek

- File widgets_tree.py.patch added

It fails in element conversion to string but the problem is probably in the element, which should be a string ('QgsComposerLabelWidgetBase') while it seems to be a reference (?) to PyQt4.QtCore.QString. It seems that it only happens with Python 2.7, I have only 2.6 on my machines. Could you please try the patch attached?

Hi

Ok good if the customization file is current then its not urgent to resolve thanks.

Regards

Tim
