You did the right thing attaching the plugin so that I can test what fails.

Thanks for signaling the issue.

#2 - 2012-07-09 11:35 PM - Alessandro Pasotti

try changing

```
def version():  
    return "Version " + "0.1"
```

to

```
def version():  
    return "0.1"
```

- Status changed from Open to Feedback

```
def name():
    return "Acca plugin"
def description():
    return "Plugin implements ACCA algorithm"
def qgisMinimumVersion():
    return "1.0"
def version():
    return "0.1"
def authorName():
    return "Bastrakov Sergey"
def classFactory(iface):
    from plugin import Acca_Plugin
    return Acca_Plugin(iface)
```

With this modifications the plugins loads fine for me. You will see a lot of warnings since many metadata are missing and metadata.txt is also missing, but the plugin will load anyway.

Hmm, now everything is OK. Thank you for the operative help.

#6 - 2012-07-10 02:29 AM - Nathan Woodrow

Just note that I would like to see some more information on the plugin before I approve it, mainly a better description.

#7 - 2012-07-10 02:39 AM - Alessandro Pasotti

- Status changed from Feedback to Resolved

@Nathan,

might be better to open a new ticket for this. But please search first, IIRC there is already something about using longer descriptions through a new field. A task for the next HF.

#8 - 2012-07-10 03:15 AM - Сергей Бастраков

I have successfully uploaded the plugin. Add a description, but I do not see it in the "My plugins". Is it Ok?
