

QGIS Application - Bug report #6154

SLD export fails when using old symbology

2012-08-04 09:00 AM - Andrea Aime

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Symbology	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: wontfix
Crashes QGIS or corrupts data:	No	Copied to github as #: 15478
Description		
<p>Trying to export a 5 classes graduated symbology using the "old symbology" as SLD results in an incomplete error message simply saying "Could not save symbology because:" (no further explanation).</p> <p>Switching to "new symbology" and saving the file work fine instead. The style is the same as in report #6153</p>		

History

Hi,

old symbology is not supported anymore, it will dropped in QGIS 2.0 and it is still in QGIS 1.x for retro-compability with older qgis projects.

Btw, the bug happens on release 1.8.0 Lisboa on both Ubuntu 10.04 and Windows XP

If this is the case the "export to SLD" functionality should at least be hidden or disabled when using the old symbology, or the error message be updated to tell the user export to SLD only works with new symbology. As it stands it's confusing, one has to guess that changing symbology will fix the issue.

This is more important on Linux, where the old symbology seems to be the default, while on Windows XP I'm getting the new symbology as the default one when opening the property dialog

This is more important on Linux, where the old symbology seems to be the default, while on Windows XP I'm getting the new symbology as the default one when opening the property dialog

It is not the default under Linux. In your case it probably depends on an old configuration of a previous QGIS installation. In the general options you can configure QGIS to work by default with the old or new symbology.
