

## QGIS Application - Feature request #6188

### Let the user fine tune stretching values in raster properties/style

2012-08-13 02:09 AM - alobo -

<b>Status:</b>	Closed	<b>Resolution:</b> <b>Copied to github as #:</b> 15502

<b>Easy fix?:</b>	No	
<b>Description</b>		
<p>When the user selects Use standard deviation and selects a value for the sd, the calculated min,max values are greyed and cannot be modified. If the user then selects Custom min/max values, the previously calculated values are erased. This used not to be the case in previous versions.</p> <p>Min/max values calculated from sd ranges are very useful as a first guess, but very often must be fine tuned. Thus not erasing the calculated values is an important aid.</p> <p>A critical case is when color composites of several images must be compared, as all of them must have the same stretching.</p>		

#### History

##### #1 - 2012-08-13 02:20 AM - Giovanni Manghi

- Target version changed from Version 1.8.0 to Version 2.0.0
- Operating System deleted (all)

##### #2 - 2012-10-06 02:17 AM - Pirmin Kalberer

- Target version changed from Version 2.0.0 to Future Release - Nice to have

##### #3 - 2013-03-13 03:17 AM - Alexander Bruy

- Status changed from Open to Feedback

Seems works in master

##### #4 - 2013-05-29 09:33 AM - Paolo Cavallini

- Priority changed from High to Normal

Closing for lack of feedback - please reopen if necessary.  
Thanks.

##### #5 - 2013-05-29 09:36 AM - Paolo Cavallini

- Status changed from Feedback to Closed

##### #6 - 2013-05-31 04:28 AM - alobo -

Tested with 1.9 on Mac: works fine
