

QGIS Application - Bug report #6298

Gdal Tools and OSX Mountain Lion (OSX 10.8.1)

2012-09-03 02:07 AM - Damien O'Grady

Status:	Rejected	
Priority:	Normal	
Assignee:		
Category:		
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: invalid
Crashes QGIS or corrupts data:	No	Copied to github as #: 15594
Description		
<p>Our student had the following problem, after migrating to OSX 10.8.1, who is missing their raster menu items:</p> <p>??After updating from OSX Lion to OSX Mountain lion (OSX Version 10.8.1), upon opening QGIS I get this message</p> <p>"Unable to load GdalTools plugin. The required "osgeo [python-gdal]" module is missing. Install it and try again".</p> <p>When I check the plugins, it looks installed and the box is checked. How do I resolve this issue? I have no menu options for the Raster dropdown menu, making this practical undoable on this machine.??</p> <p>We'd be grateful for any help.</p> <p>Regards</p> <p>Damien</p>
