| **Description** |
|---|
| After submitted the first package the plugin icon is stored in the web app. <br> Unless the Description, the icon cannot be changed in a second time using the Edit button. |

## History

**#1 - 2012-10-04 06:47 AM - Giuseppe Sucameli**

Here's an example of plugin I changed the icon of:

RT Omero

The displayed icon is the old one, though in the package there's the new icon.

Note: the path to the icon within the package doesn't changed between versions (i.e. the plugin icon is still located at icon/rt_omero.png), I just replaced the icon.

I'm still unable to change the icon using the "Edit plugin" page.

I can choose a new icon using the HTML input file control in that page, but once saved the selected icon seems not stored (it's neither displayed in the plugin page nor listed in the "Edit plugin" page).
