

QGIS Application - Bug report #6608

QGIS crashes when used as WFS client together with QGIS server

2012-11-02 09:56 AM - Giovanni Manghi

Status:	Closed	
Priority:	Severe/Regression	
Assignee:	René-Luc ReLuc	
Category:	QGIS Server	
Affected QGIS version:	master	Regression?: No
Operating System:	Ubuntu	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: fixed
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 15796
Description		
The latest versions of QGIS WFS Server master are making QGIS desktop crash when adding a WFS layer. Tested on both qgis desktop master and 1.8 on both Windows and Linux. Downgrading to qgis server 1.8 solves the issue, so it is a regression.

error message in linux terminal is:

```
vania@nivalis:~$ qgis
```

```
Warning: loading of qgis translation failed [/usr/share/qgis/i18n//qgis_en_US]
```

```
Warning: loading of qt translation failed [/usr/share/qt4/translations/qt_en_US]
```

```
Warning: QHttp: empty path requested is invalid -- using '/'
```

```

- Subject changed from QGIS WFS server (master) makes QGIS Desktop crash to QGIS crashes when used as WFS client together with QGIS server

It took me another few hours of tests to make further discoveries about his issue.

- at the beginning I was thinking that the crash was gone on qgis (as wfs client) on Linux, but then I realized I was wrong
- later I was thinking that the crash was affecting just qgis on windows installed with osgeo4w, but then I realized it was affecting also qgis standalone
- later on I was thinking that the issue was just affecting all polygons layers served as WFS, only if added before adding any other wfs layer, but I was wrong.

...
...
...

long story short: please try this service (is using the latest qgis server master)

http://mapserver.uevora.pt/cgi-bin/qgis_mapserv.fcgi?map=/home/mapserver/wfs_tests/wfs_test_qgis_server.qgs

and give a look also to the vectors that are feeding this service

https://www.dropbox.com/s/4kf2bblznft0ws0/wfs_tests.tar.gz

At this point my conclusions are:

points and lines are not affected by the issue (crash when using qgis as wfs client).

polygons are affected, but not all.

I see different cases.

- There are polygon layers that do work ok when served as WFS layers, see for example "evora" and "test_polygons"
- There are polygon layers that do always make QGIS (as WFS client) crash when served as WFS layers, see for example "TM_WORLD_BORDERS"
- There are polygon layers that do **sometimes** make QGIS (as WFS client) crash when served as WFS layers, see for example "zpe"

- There are polygon layers that do work ok when served as WFS, but they always miss (the same) features when compare with the original, see for example "distritos2009", "cartografia_primavera_..." and "pt_wgs84" (this last one is a subset of "TM_WORLD_BORDERS" and does not show the only geometry in it, but the attributes are there)

#4 - 2012-11-18 08:36 AM - René-Luc ReLuc

- *Status changed from Open to In Progress*

The crash is due to MultiPolygon element with coordinates element empty.

I push the correction :

"48270916f5b5b8d8517f7ed9ad583c08b767bbed":commit:48270916f5b5b8d8517f7ed9ad583c08b767bbed
