

QGIS Application - Bug report #661

OS X: GUI Issue: Window inaccessible when adding new vector layer

2007-03-15 06:31 AM - david-greenberg3-gmail-com -

Status:	Closed	
Priority:	Low	
Assignee:	Tom Elwertowski	
Category:	GUI	
Affected QGIS version:		Regression?: No
Operating System:	OS X	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 10720
Description		
<p>When the user clicks on the button in the tool bar to add a new vector layer, a window is drawn in the center of the screen. When you click on the Add button in this window, a second window, smaller than the first, is drawn BEHIND the first window and is inaccessible to the user. There is no option but to crash out of the program. This second window must be programmed to be the front, active window. The easy workaround, for the moment, is to move the first window off to the side before clicking the Add button.</p>
