| Affected QGIS version: | | Regression?: No |
| Operating System: Windows | | Easy fix?: No |
| Pull Request or Patch supplied: | | Resolution: fixed |
| Crashes QGIS or corrupts data: | | Copied to github as #: 10721 |
| Description | | |
| <p>I am running qGIS with [[MapInfo]] tab files, mainly using it to export map files for my mapserver 4.10.1</p> <p>In the export there are some errors:</p> <ul style="list-style-type: none">- The tabfiles are handled like ESRI shape files, with the parameter DATA set to the path of the file, this is incorrect. It should use CONNECTION and CONNECTION TYPE OGR instead | | |

is this still valid with new python plugin?

If not, please close it.
