Pull Request or Patch supplied:		
Easy fix?:	No	Resolution: Copied to github as #: 15878
Description It would be nice if it was possible to: (1) duplicate an existing rule (maybe it would be best to implement copy and paste of rules, to also allow duplicating it to another layer or project). (2) create a sub-rule in one step. Currently "refine current rules" only has options for adding scales, categories or ranges. If you want to create a sub-rule manually you need to know that you can use the "add" button and then drag-and-drop to make it a sub rule. It would be nice to have an option called something like "refine current rules>use expression"

Hello, bug triage...

you can copy/paste rule(s) on the same layer and on other layers. Your first point is fully implemented.

For the second point, a workaround could also be to add a sub-rule whenever you click on the + button when a rule is selected.
