

QGIS Application - Bug report #6726

Query builder quotes field names with spaces twice; resulting query fails

2012-11-18 04:38 PM - Alister Hood

Status:	Closed	
Priority:	Severe/Regression

Crashes QGIS or corrupts data:		Copied to github as #: 15890
Description - Add the attached layer. - Open the layer's attribute table and click the advanced search button. - Double-click on each field name to insert it in the search query. They will be inserted as "example" in quotes and "example 1" in two sets of quotes! I'm not sure if the quotes are needed in the first case, but they certainly aren't a problem. But in the second case there should only be one set of quotes. If you run a query with the two sets of quotes you get an error message: "Parsing error: syntax error, unexpected COLUMN_REF, expecting \$end". This is a regression since 1.8

fix #6726

History

#1 - 2012-12-25 06:03 AM - Giovanni Manghi

- Target version set to Version 2.0.0
- Status changed from Open to Feedback

I'm pretty sure that the quotes are added to escape the space in the second column name, anyway on the latest master this do not seems to cause the query builder to fail. Please check and report back.

#2 - 2012-12-25 06:09 AM - Giovanni Manghi

I'm sorry you are right, I was testing on 1.8 and not master. The behavior is confirmed and it causes the query to fail.
