QGIS Application - Bug report #6751
Attribute table does not sort properly for GML file

2012-11-22 05:20 AM - Dieter De Paepe

Status:	Closed			
Priority:	Normal			
Assignee:				
Category:	GUI			
Affected QGIS version:	master	**Regression?:**	No	
Operating System:		**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	worksforme	
Crashes QGIS or corrupts data:		**Copied to github as #:**	15908	

Description

I have included a GML file that was produced using the Geotools 1.8.0 java library.
When opening the attribute table for this file, the sorting on the different attributes seems to simply sort on the "gml_id" attribute.
Strangely enough, this does not occur for smaller feature sets (eg created by removing most of the features from the included GML file). I suspect one of the entries is causing this behaviour, but I have not further investigated this issue.

This issue was tested on version 1.8.0-Lisboa.

- File OUT_DropCables.xml added

Some further investigation shows another problem. In the included GML file (which is a subset of the first GML file), there are 8 features present, but only 3 show up in the attribute table.
It seems to do with the "gml-id" attribute, where all values ending in 7d0a up to 7d0e are not showing up.

- Status changed from Open to Feedback

Hello, bug triage...

this seems fixed in QGIS 2.13 master. Can you/someone else confirm it ?

I'm afraid I'm no longer active in the GIS world. I can forward this request to former associates, if they can test using an out-of-the-box QGIS version (non-dev version).

#4 - 2016-04-09 11:42 AM - Giovanni Manghi

- Resolution set to worksforme

- Status changed from Feedback to Closed
