QGIS Application - Bug report #6850
QGis crash when deleting nodes

2012-12-10 02:26 AM - Samy MEZANI

Status:	Closed			
Priority:	Severe/Regression			
Assignee:				
Category:	Digitising			
Affected QGIS version:	1.8.0	**Regression?:**	No	
Operating System:	Debian GNU/Linux	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**		
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	15986	

Description

When I delete one or several nodes in an edited polygon layer in SHP format, QGis crash.
The backtrace log and an archive of the layer are joined.

Qgis version : 1.9.90+git20120612+5ebdbe3~unstable1

History

#1 - 2012-12-10 02:46 AM - Giovanni Manghi

- Target version changed from Branch - Advanced Editing to Version 2.0.0

- Status changed from Open to Feedback

- Category changed from Vectors to Digitising

have you tested qgis master? It should be fixed there. Please try and report back.

#2 - 2012-12-10 03:40 AM - Samy MEZANI

- Status changed from Feedback to Closed

OK, the problem is fixed with version 1.9.0+git20121208+7841975~unstable1
I don't understand why my qgis version was not updated with the latest on repository http://qgis.org/debian-nightly, but it's an other problem.

Thanks !
