Does your input file have an assigned CRS?

I am getting a shapefile with a valid prj file, but my input file has a defined CRS. If it doesn't have one, SAGA will not generate a prj, since it cannot know the input CRS.

Do you think that maybe SEXTANTE should warn about this? Or maybe, if the layer used as input for SAGA/GRASS doesn't have a CRS, re-save it with the current project CRS

You got it, no CRS in input. As this is a general issue, I think the safest option would be to take the CRS used by QGIS project for that layer.
