QGIS Application - Feature request #6986
Browser should support formats with multiple layers in it

2013-01-13 04:41 AM - Giovanni Manghi

Status:	Closed			
Priority:	High			
Assignee:				
Category:	Browser			
Pull Request or Patch supplied:	No		**Resolution:**	fixed/implemented
Easy fix?:	No		**Copied to github as #:**	16091

Description

When you add the normal way file formats like GPX or personal geodatabase (samples attached), qgis pops up a dialog to allow choose what layer(s) inside that file the user wants to load.

Actually using the browsers this formats is seen just as a single layer, and so the user cannot control what layer to load.

History

#1 - 2013-06-02 07:57 AM - Giovanni Manghi

- Tracker changed from Bug report to Feature request

#2 - 2013-08-23 08:48 AM - Paolo Cavallini

- Target version changed from Version 2.0.0 to Future Release - High Priority

#3 - 2014-06-12 06:13 PM - Giovanni Manghi

- Resolution set to fixed/implemented

- Status changed from Open to Closed

seems fixed in master.
