QGIS Application - Bug report #6994
Can't update NULL numerical MS SQL

2013-01-14 04:29 PM - Nathan Woodrow

Status:	Closed		
Priority:	Normal		
Assignee:	Tamas Szekeres		
Category:	Data Provider/MSSQL		
Affected QGIS version:	master	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	16098

Description

Seems that you can't add or update a numerical field that allows nulls using the attribute table or form. If you try the attribute form doesn't allow you to enter a value into the null field.

Create the following table:

CREATE TABLE [dbo].[test](
   [id] [int] IDENTITY(1,1) NOT NULL,
   [value] [decimal](10, 3) NULL,
   [valuef] [float] NULL,
   [valuer] [real] NULL)

1. Open the layer in QGIS. It doesn't need a geometry column
2. Open the attribute table
3. Make the table editable
4. Click the add button
5. Try entering a value into any of the fields. The form will stop you.

I'm not 100% sure where the issue is here. I have tried to reproduce it on PostGIS and Spatialite but at the moment it seems to only happen with MS SQL layers.

This appears to be working for me. Could you check with the latest version?
