Description

When launching QGIS (quantal master builds offered through http://qgis.org/debian-nightly) under ubuntu's upcoming ringtail 13.04, an error box appears, stating:

Couldn't load PyQGIS.

Python support will be disabled.

    Traceback (most recent call last):

    Python path:

    '/usr/lib/python2.7/dist-packages/ubuntuone-storage-protocol']

QGIS then launches successfully but all python-based features are disabled.

the quantal builds are meant for quantal.

Fair enough :-) ive had succesful experiences in the pass with precise builds running fine under quantal. Guess luck ran out.

That said, should a ticket be opened to request the setting up of a raring ringtail build. Or do you prefer to wait until release inApril?
