

QGIS Application - Bug report #7113

QGS project files containing openlayers layers make QGIS crash when openlayers not setup

2013-02-07 01:37 AM - Gen Gill

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Project Loading/Saving	
Affected QGIS version:	master	Regression?: No
Operating System:	Windows X64	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: worksforme
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 16187
Description		
<p>Hello to all,</p> <p>It's all in the subject.</p> <p>I tried to open a QGS file containing openlayers layers right after my QGIS setup through OSGEO4W and it crashed at the point where it was loading openlayers layers.</p> <p>I setup openlayers and then it went ok.</p> <p>More generally, QGS project files periodically and very regularly crashes QGIS, often when upgrading versions on my Windows OSGEO4W setup. About once every three months per project, which is quite a lot. Is it the same on Ubuntu or other Linux distributions ?</p> <p>Am I the only one to suffer from this and if not could it be possible to make Qgis more stable with these files, loading only valid layers and popping the usual warning when necessary ?</p> <p>Thanks to all developpers for the great work.</p> <p>Gen.</p>

- Status changed from Open to Feedback

I cannot confirm here on qgis master/linux, what happens is that qgis pops up the "missing layer" dialog.

Please test with a minimal project, if not done already. Tanks!
