

QGIS Application - Feature request #7192

system specific location of qgis settings

Status:	Closed	
Priority:	Normal	
Assignee:	Nathan Woodrow	
Category:	Build/Install	
Pull Request or Patch Supplied:	Yes	Resolution: fixed/implemented
Easy fix?:	No	Copied to github as #: 16238
Description (couldn't reopen #1442) Use a system-specific location for QGIS plugins and other generated user support files (IOW, move the ~/.qgis folder). For example ~\\Application Data\\qgis in Windows XP, and ~/Library/Application Support/QGIS on OS X. See #1442 for details and previous discussion.

Folders should be versioned. ~\\Application Data\\qgis2 and ~/Library/Application Support/QGIS2. Or better, .../qgis/2 and .../QGIS/2.

Isn't this currently the case? It is on Windows and the other platforms.

I think version should only be used when the format of the configuration changes between versions. Otherwise it's only an annoyance to force config separation among versions.
