| <b>Description</b><br><br>eh installed the versions qgis 1.7 and 1.8 (win 7 64bits), when I want access project properties Ctrl + p, closes the program, what curious is that before walked! uninstall to try other things and now I have this problem, anyone know why?? it is clear that my English is not very good but anyway.<br>I'm having several problems with qgis in wind 7.<br>Best Regards |        |                                     |

### History

#1 - 2013-03-01 10:18 AM - Giovanni Manghi

- Resolution set to invalid
- Status changed from Open to Closed

Hi,

this is not a forum, but the place where to report issues in a specific way, using meaningful titles and detailed summaries. Unfortunately is quite clear that you are having local issues, as QGIS usually runs normally on Windows and other platforms. Please use the users mailing list or IRC chat to share your problems.

Among the other things you can try do is delete the ".qgis" folder.

cheers!
