

## QGIS Application - Feature request #7397

### allow measure tool to apply to existing features

2013-03-19 04:05 PM - John Sankey

<b>Status:</b>	Open	<b>Resolution:</b> <b>Copied to github as #:</b> 16366

<b>Easy fix?:</b>	No	
<b>Description</b>		
<p>Currently, it seems that the measure tool only works for an existing feature if that feature is retraced on the fly. It would save a huge amount of work with complex features if it would measure the currently selected feature; even better if it could also sum the measure of all features in a layer. (If it already does this, a reply to <a href="http://gis.stackexchange.com/questions/54663/qgis-1-8-0-mac-where-is-measure-window-or-measure-area-symbol">http://gis.stackexchange.com/questions/54663/qgis-1-8-0-mac-where-is-measure-window-or-measure-area-symbol</a> would be most appreciated.)</p>		

#### History

**#1 - 2013-03-24 04:25 AM - John Sankey**

All features in an area are calculated in layer properties field calculator, but not individual selected features.
