QGIS Application - Bug report #7409
Remove multiple layers results in crash

2013-03-21 05:23 AM - Entruchio Marchubar

Status:	Closed			
Priority:	Normal			
Assignee:				
Category:				
Affected QGIS version:	1.7.4		**Regression?:**	No
Operating System:	Linux Mint		**Easy fix?:**	No
Pull Request or Patch supplied:	No		**Resolution:**	worksforme
Crashes QGIS or corrupts data:	Yes		**Copied to github as #:**	16376

Description

OS: Linux Mint 14.

QGIS version: 1.7.5-Wroclaw (that's what's in the Mint Repos)

I've looked and can't find a similar bug - apologies if it's a known one.

When I select multiple layers and click remove, the whole program simply shuts down. It happens with and without plugins enabled.

History

#1 - 2013-03-21 06:06 AM - Giovanni Manghi

- Affected QGIS version changed from master to 1.7.4

- Resolution set to worksforme

- Status changed from Open to Closed

please update to qgis 1.8 with the ubuntugis repo

https://launchpad.net/~ubuntugis/+archive/ubuntugis-unstable/

this bug was solved a while ago.
