QGIS Application - Feature request #7487
Load database layer using dropdown database list

Pull Request or Patch supplied:		**Resolution:**	duplicate
Easy fix?:	No	**Copied to github as #:**	16439

Description

Now that we have icons to load PostGIS, Spatialite, MSSQL, and even SQL Anywhere layers, it would be nice if we could consolidate them into a Database dropdown list. Something like this was done for the Select feature tools. Currently the Add PostGIS and Spatialite layer icons look so much alike that I sometimes select the wrong icon. A database dropdown list similar to the how the Select dropdown works will clean up the gui, and cut down on confusion.

This was already discussed about 2 years ago. Also patch was provided and even applied, but then it was reverted. For more details see this discussion in developers list http://lists.osgeo.org/pipermail/qgis-developer/2011-January/012585.html.
