

QGIS Application - Bug report #7532

Startup forces new project document, even when opening data file

2013-04-06 09:41 PM - William Kyngesburye

Status:	Closed	
Priority:	Severe/Regression	
Assignee:		
Category:	GUI	
Affected QGIS version:	master	Regression?: No
Operating System:	OS X	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 16476
Description <p>If I double-click a data file, like a shapefile, when QGIS is <i>not</i> running, QGIS starts, the shapefile is added to the default new project, then QGIS tries to create a new empty project, which then causes QGIS to prompt to save the one just created with the shapefile. If I save or don't save it, a new empty project is created, without the shapefile. If I cancel, it does not create a new empty project, leaving the shapefile in the first new project. This is a regression, I think this has happened in the past, possibly Mac-specific, like something got out of sequence in the startup process when changes were made to the startup.</p> <p>What should happen is that the shapefile or other data file starts QGIS and is added to a new project document. That's it, no attempt to then create another new empty project.</p>

Hi William,

Please test if attached patch fixes it. Patch works for me under 10.7.5.

#2 - 2013-04-07 10:17 AM - William Kyngesburye

The patch works for me. Also 10.7.5 (and Qt 4.8.4).

#3 - 2013-04-07 02:00 PM - Larry Shaffer

- Status changed from Open to Closed

Fixed in changeset commit:"5e39bac1f9da74d8c084462608850f76b4e783a6".
