

QGIS Application - Bug report #7595

QgsProject writeEntry not safe

2013-04-13 12:13 AM - Denis Rouzaud

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Project Loading/Saving	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 16525
Description		
QDomDocument::createElement (const QString & tagName) If tagName is not a valid XML name, the behavior of this function is governed by QDomImplementation::InvalidDataPolicy http://doc.qt.digia.com/4.6/qdomimplementation.html#InvalidDataPolicy-enum Default behaviour seems that data are stored anyway. If a plugin messes up with this, the project file is not readable anymore.
