Description

Is it possible to get number formatting in Styles/Legend to follow locale settings? Now when I'm "graduating" my data I got class values like: 88516.8000 - 118022.4000. But I like to have like "88 516.8000 - 118 022.400". Especially important in "Pretty breaks", but also in other classification's.

I really like new Labeling, when you can label and change number formats with expression, quite easily. If we can have same kind of functionality to classification/legend values: perfect for me.

I usually label my population classifications like this:
  "Under XXX XXX people"
  "XXX XXX - YYY YYY people"
  "Over YYY YYY people"

I hope this is doable.
