Description

There is a bug somewhere in vector feature editing code that results into "ERROR 1: Attempt to read shape with feature id (XX) out of available range."

Observed while editing data in Shapefile (creating new features, saving, deleting from attribute table, copying/pasting new ones etc.). Exact steps to repeat are unknown, still one needs to delete some features to trigger it.

QGIS versija   1.9.0-Master   QGIS code revision   105e45b
Compiled against Qt   4.8.4   Running against Qt   4.8.4
Compiled against GDAL/OGR   1.9.2   Running against GDAL/OGR   1.9.2
