**Revision e53aa076 - 2013-07-04 09:07 PM - Matthias Kuhn**

Merge features: Fix "take attributes from selected feature"

Fix #7668

Fix #7922

#### History

**#1 - 2013-04-26 01:24 AM - Luca Lanteri**

Confirmed also on linux64 - ubuntu 12.10.

**#2 - 2013-05-18 01:28 AM - Alessandro Ciali**

I think that's a misunderstanding. The bug I was referring is about the merge tool in the editing tools, the tools that, during an editing session, is used to select and merge two or more FEATURES NOT THE WHOLE SHAPES.

So it seems to me that the bug #7823 is not related to #7668.

**#3 - 2013-06-02 02:05 AM - Giovanni Manghi**

- Status changed from Open to Feedback

Hi Alessandro, still happens for you? here does not happen. Can you attach sample data? thanks.

**#4 - 2013-06-02 02:28 AM - Alessandro Ciali**

Yes Giovanni, still present on the latest master. I refer to the merge selected features tools in the editing toolbar. Sample data is not necessary, the bug

appens with every vector layer (line, polygons).

Not completely sure, but I think that this bug is related in some way to #7472.

I will check future version

#### #5 - 2013-06-02 02:31 AM - Giovanni Manghi

Alessandro Ciali wrote:

*Yes Giovanni, still present on the latest master. I refer to the merge selected features tools in the editing toolbar.*

yes I know,

*Sample data is not necessary, the bug appens with every vector layer (line, polygons).*

it does not happen here, so this is why I asked for sample data.

#### #6 - 2013-06-02 03:36 AM - Alessandro Ciali

- File *verifiche\_idrauliche.zip* added

Tested with commit:e2bd04f on win64.

steps:

1. start editing
2. select at least 2 features
3. use merge selected feature tool
4. in the tool window, select one feature (whose attributes should be transferred to the merged shape)
5. QGIS crash

It not appens on 1.8

Attached sample data, have you any idea why this bug is not reproducible? If you send me some instruction, I can make further test.

#### #7 - 2013-06-02 03:55 AM - Giovanni Manghi

Just tested on qgis master/osgeo4w and does not crash.

Can you temporarily remove your .qgis2 folder and so check if is a plugin that is interfering? cheers.

**#8 - 2013-06-02 06:28 AM - Alessandro Ciali**

- File *qgis-20130602-152215-8444-8592-e2bd04f.zip* added

I renamed directory .qgis2 and launch qgis so that a new empty one was created. All plug-ins but default ones were unloaded. I tried to merge 2 features, but the crash still happened.

I attach the dump produced on crash, if it can help.

**#9 - 2013-06-02 06:36 AM - Alessandro Ciali**

After further tests, and reestablishing the original .qgis2 directory, I created a new project, I added the polygon layer I sent to you, then I selected two features and merged them together. Well, no crash happened, but no attribute was passed to the resulting merged feature (the fields are empty).

I don't find an answer to this random behaviour...

**#10 - 2013-06-02 06:57 AM - Giovanni Manghi**

Alessandro Ciali wrote:

*Well, no crash happened, but no attribute was passed to the resulting merged feature (the fields are empty).*

well, odd again because with your dataset I don't see this behavior.

On the other hand if the columns are numeric the tool is known to fail, see #6902

**#11 - 2013-06-02 01:52 PM - Alessandro Ciali**

At the end of my tests, these are the results (on my computers!):

- merge feature no more causes QGIS to crash, but when I select a feature whose attribute will be transferred, all fields get empty, no matter if they are numeric or character type.

- clicking ok, the tool merges the 2 features correctly, but if I have made a choice in the merge dialog window, attributes are empty for the new merged feature.

So, I don't know where the problem is: it seems to be my problem, due to installation, or something else, but the question is: has anybody else experienced this bug? If I'm the only one, I suggest to close the ticket.

**#12 - 2013-06-02 02:45 PM - Giovanni Manghi**

Hi Alessandro,

can test on another machine? I'm not getting your issues, but this could mean nothing.

**#13 - 2013-06-04 12:27 AM - Andreas Neumann**

see also #7922 - which seems to be the same bug.

With the latest OSGeo4W nightly I do not have the problem anymore.

**#14 - 2013-06-04 12:30 AM - Andreas Neumann**

I can confirm that the attribute handling is buggy.

After a merge - all the attributes are gone, even if the user selected a record before.

So this bug cannot be closed yet.

**#15 - 2013-06-19 06:15 AM - Matthias Kuhn**

Please test if commit:7d38eac solved this issue.

**#16 - 2013-06-20 08:55 AM - Alessandro Ciali**

- File *qgis-20130620-173824-5388-4756-e4b278d.zip* added

I've now tested version commit:e4b278d (win7 64bit). To be sure that any plugin could collide with merge tool, I renamed .qgis directory before starting QGIS. Then:

- created a new shape in 3003 projection and 1 field (ID, numeric), drawn with categorized symbology based on ID field.
- I started editing and I created 4 polygons with different ID values.
- I selected 2 polygons and used the tool merge selected features.
- I selected one of the two features attributes to keep after merging

QGIS crashed as usual, minidump attached. Tell me if it is necessary further test tha I can perform.

**#17 - 2013-06-22 06:26 AM - Alessandro Ciali**

With the latest version commit:f8d6e32 on win7 64bit, QGIS master no more crashes using merge selected features, but:

- selecting two or more features and using merge selected features tool without making any choice in the merge features attributes performs correctly without errors
- selecting one of the selected feature to copy attribute from, results in an empty record
- choosing field by field the attributes of the merged feature from the dropdown menu, the merge operation ends correctly

I've tested this behaviour with integer, real, text field experiencing no difference; minimum, maximum. median, sum, concatenation operators selectable from the merge attribute window perform correctly.

Merge attributes tool shows exactly the same behaviour.

#18 - 2013-06-24 04:46 AM - Giovanni Manghi

- OS version deleted (win7 - 64bit)

- Operating System deleted (windows)

Matthias Kuhn wrote:

| Please test if commit:7d38eac solved this issue.

Hi Matthias,

it still crashes when clicking on "takes attributes from selected feature"

Warning: loading of qt translation failed [/usr/share/qt4/translations/qt\_en\_US]

Fatal: QGIS died on signal 11

#### #19 - 2013-06-24 04:47 AM - Giovanni Manghi

- selecting two or more features and using merge selected features tool without making any choice in the merge features attributes performs correctly without errors
- selecting one of the selected feature to copy attribute from, results in an empty record
- choosing field by field the attributes of the merged feature from the dropdown menu, the merge operation ends correctly

Hi Alessandro,

what is the difference between the 2nd and 3rd case?

#### #20 - 2013-06-24 05:00 AM - Alessandro Ciali

In the 2nd case, you have to select one row in the merge selected feature window and the click on the "Take attribute from selected feature" button; in the 3rd case I've chosen the feature from the dropdown menus in the id line in the merge selected feature window.

#21 - 2013-06-24 05:04 AM - Giovanni Manghi

Alessandro Ciali wrote:

In the 2nd case, you have to select one row in the merge selected feature window and the clik on the "Take attribute from selected feature" button;

in the 3rd case I've choosen the feature from the dropdown menues in the id line in the merge selected feature window.

ok, in my box the 2nd option still causes crashes.

#22 - 2013-07-04 12:10 PM - Matthias Kuhn

- Status changed from Feedback to Closed

Fixed in changeset commit:"e53aa07698323c0a65d9071c35815ed0eedc72a2".
