Pull Request or Patch supplied:	No	**Resolution:**	duplicate
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	16603

Description

If I make a definition query on a layer using the Query Builder, accept the changes, and then go back to the query builder to modify my existing query, the Sample function only shows a sample based on the existing query.

For example, if I query my existing countries layer for "Continent = 'Europe'" and then decide I want to also include "Continent = 'North America'", I can't get 'North America' to show up in the field sample; it only shows 'Europe'. I assume this is because the field sample reads off of the dataset using the active query. Ideally, the sample should include all values from the original dataset.
