Category:	Vectors	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution:
Crashes QGIS or corrupts data:		Copied to github as #: 16645
Description steps to reproduce: 1. load a vector layer and a table 2. join them 3. save the project and then open the project 4. select the vector layer and go into edit mode 5. click one of the features with identify tool 6. open feature form -> main fields (=not joined fields) in the attribute form are grayed out The written qgs file has edittypes tags with editable=0 as the follows. <edittypes> <edittype editable="0" type="0" name="id"/> <edittype editable="0" type="0" name="name"/> </edittypes> On the other hand, the joined fields are editable despite the fact that they are not targets for editing.

- Priority changed from Normal to Severe/Regression

- Category set to Vectors

this does not happen on qgis 1.8, so it is a regression.
