Crashes QGIS or corrupts data:		**Copied to github as #:**	16703

Description

When adding a new postgis layer, I always get warnings in the message log saying

SELECT styleQML FROM layer_styles WHERE f_table_catalog=....
[ERROR: relation "layer_styles" does not exist]

I guess this is related to the possibility to save layer styles to the database.

Is this feature enabled by default? Are databases expected to contain a table "layer_styles"?

- Status changed from Open to Closed

Seems to be fixed already.

Thank you jef.

commit:38d63d1ac

#2 - 2013-05-14 03:27 AM - Emilio Loi

> *I guess this is related to the possibility to save layer styles to the database.*

You are right, it was my fault. When you add a postgis layer my code controls for a layer style saved in the database in "layer_styles" table. I forget to add a
control on the table existence.
I was providing a patch, I'll merge my repo getting Jef patch.

It seems that this error still occurs when adding a SpatiaLite layer.
