

QGIS Application - Bug report #784

Qgis vector multipolygon crash, OS X

2007-10-23 04:56 PM - John Tull

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Build/Install	
Affected QGIS version:		Regression?: No
Operating System:	OS X	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 10843
Description		
<p>I have a crash when trying to stop editing and saving a shapefile in 0.9 trunk rev 7283. I have a polygon shapefile, I select a polygon from another layer, paste it into the new vector and stop editing. With one polygon it saves with no issue. If I have multiple polygons in the vector, it crashes and provides no output on the command line in OS X when run from the Terminal.</p> <p>I use the frameworks from William Kyngsburys, run OS X 10.4.10.</p>		

History

#1 - 2007-10-25 07:05 PM - John Tull

I have tried with subsequent builds of qgis from trunk, but problem persists. This time I created a new shapefile and pasted, in one operation, multiple polygons from another shapefile. The program crashed again after toggling editing and hitting save.

#2 - 2007-11-06 05:39 PM - Martin Dobias

- Resolution set to fixed

- Status changed from Open to Closed

Fixed in commit:8e1c65e5 (SVN r7345).

#3 - 2009-08-22 12:52 AM - Anonymous

Milestone Version 0.9.1 deleted
