Affected QGIS version:	master	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	
Crashes QGIS or corrupts data:		**Copied to github as #:**	16737

Description

On QGIS master it happens a lot that when splitting a perfectly good geometry the tools silently fails and then in the log it shows

Already active iterator on this provider was closed.

If the user save edits, re-toggle editing and try the split again the operation usually works.

Really not sure if it is a regression, it is for sure a real pain for real world work.
