

QGIS Application - Bug report #7931

QGIS crashes when clicking "new project" or in program exit if a layer was added with the browser

2013-05-28 12:58 PM - Giovanni Manghi

Status:	Closed	
Priority:	Severe/Regression	
Assignee:		
Category:	Browser	
Affected QGIS version:	master	Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch submitted:	No	Resolution:
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 16801
Description On QGIS master from osgeo4w I'm getting a replicable crash when clicking on "new project -> discard" (or on program exit) if a raster was added using the browser. Does not happen if the raster was added using the standard dialog or by d&d from a Windows folder. Will test also Linux. Tomorrow I will add also the minidump.

#2 - 2013-05-28 05:30 PM - Larry Shaffer

- File browser_load-layer-then-save_crash-report.txt added

Confirmed here on Mac as well. Not specific to loading rasters though.

- 1) Open new project
- 2) Add layers from browser
- 3) Save project -> crash

This is with loading a known good Spatialite data source. Similar crash report output attached.

#3 - 2013-05-28 05:44 PM - Nathan Woodrow

- Subject changed from QGIS crashes when clicking "new project" or in program exit if a raster was added with the browser to QGIS crashes when clicking "new project" or in program exit if a layer was added with the browser

#4 - 2013-05-31 02:14 PM - Giuseppe Sucameli

I doesn't matter if the layer is loaded from browser or not:

- 1) new project
- 2) expand an entry in the browser
- 3) load a layer
- 4) new project

#5 - 2013-06-14 09:03 PM - Anonymous
- Status changed from Open to Closed

Fixed in changeset commit:"fec833f14553effb2d242f6832c6b17198337987".

#6 - 2013-06-14 09:05 PM - Nathan Woodrow

Should be fixed now.
