

QGIS Application - Bug report #7949

Point / Line layer properties initial size value does not reflect actual width / size of feature in preview

2013-05-30 11:44 PM - Ross McDonald

Status:	Closed	
Priority:	Low	
Assignee:		
Category:	GUI	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	No	Copied to github as #: 16813
Description		
<p>Opening the layer properties for a point or line feature, on the style tab the size in the box defaults to 1.00 but that is not the actual width or thickness of the point/line displayed in the preview window. If the size is increased to the 2.00 and then reduced back to 1.00 the preview window updates to correctly show a line/point of thickness/size 2.00 then 1.00 which is different to the default line thickness (0.3) or point size (2.0).</p>
