QGIS Application - Bug report #7961
Add feature remain deactivated when toogle editing is on

2013-05-31 07:54 AM - Luca Lanteri

Status:	Closed		
Priority:	Normal		
Assignee:			
Category:			
Affected QGIS version:	master	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	duplicate
Crashes QGIS or corrupts data:		**Copied to github as #:**	16820

Description

When editing is on the "Add feature" remain deactivated. Others tool (move, node...) works fine.
It happens only with postGIS layer. Tested on Qgis 1.9-00a9a7d on windows 7

it works here, maybe a problem of permissions on the table?

#2 - 2013-05-31 07:59 AM - Paolo Cavallini

This is not the correct behaviour anyway: if one does not have permissions, the Modify should not be activated.

#3 - 2013-05-31 07:59 AM - Luca Lanteri

Also Cavallini confirms. It's not a problem of grant because it happens also with superuser. Moreover, the move and node tools work fine.

then should be a regression, so a blocker.

"change geometry" and "add feature" are different things (ie. "INSERT" vs. "UPDATE" permission).

Right, but the same layer works fine with Qgis 1.8, so in this specific case it's not a grant problem.
Can I change the state to blocker or somebody else has to do it?

What capabilities does QGIS detect (see vector layer properties, metadata tab)?

From Layer properties:
Editing capabilities of this layer
Add Features, Delete Features, Change Attribute Values, Fast Access to Features at ID, Change Geometries

Add Features, Delete Features, Change Attribute Values, Fast Access to Features at ID, Change Geometries

it seems it misses the

Add Attributes, Delete Attributes

capabilities

#10 - 2013-06-07 03:22 AM - Giovanni Manghi

- Resolution set to duplicate

- Status changed from Feedback to Closed

this should be duplicated of #8005 and was fixed. Please reopen if necessary.
