

QGIS Application - Bug report #8033

CRS selector window stopped showing when inserting shapefile with missing projection into project

2013-06-10 09:01 PM - Mathieu Pellerin - nIRV

Status:	Closed	
Priority:	Severe/Regression	
Assignee:		
Category:		
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution: worksforme
Crashes QGIS or corrupts data:		Copied to github as #: 16877

Description

In QGIS 1.8, and under QGIS master until very recently, the CRS selector window pops up when inserting into a project a new shapefile with missing projection.

Something regressed in the last few days and now the CRS selector window doesn't appear and instead all shapefiles with missing projection are silently defaulting to WGS 84.

Steps to reproduce:

0. Unzip admin_2010.zip, and notice the absence of .prj projection file for province_region.shp
1. Open a new project
2. Load the attached province_region.shp shapefile into the project
3. At this stage, the user should be asked to set the layer projection, however this step is now missing in latest QGIS master builds

History

- #1 - 2013-06-10 11:43 PM - Mathieu Pellerin - nIRV
- Resolution set to worksforme

- Status changed from Open to Closed

Hmm, no bug, only some mysterious voodoo that changed the crs for new layer default setting. Closing, thanks to Nathan for looking into this on IRC.
