<b>Description</b>  #8079 was a false alarm because I did not catch that a <b>?qgis=2.0</b> querystring is appended to whatever is specified in the <b>URL</b> field in Plugin Manager's <b>Repository details</b> dialog. Yes, it does show in the <b>Plugin repositories</b> list in Plugin Manager's <b>Settings</b> section, but it would be helpful if the <b>Repository details</b> dialog indicates the querystring that is to be appended.

It was requested as a feature, however it was just a matter of gui tweaking, so it's fixed.
