Crashes QGIS or corrupts data:		**Copied to github as #:**	10868

Description

1. load a shapefile

2. "Save as shapefile..."

3. select an existing shapefile on the system; you want to overwrite and QGIS seems to allow it:

   archsites.shp already exists.
   Do you want to replace it?

4. "Yes" - error:

   The shapefile could not be created (/home/shoofi/tmp/shape/archsites.shp)

5. on the terminal it reads:

   ERROR 1: /home/shoofi/tmp/shape/archsites.shp is not a directory.
