Description

Hi,

I am sorry to bug you about this but I have been going though the help pages and search engines and I don't find an answer to my question, so I though I would ask.

I submitted a plugin on the QGIS public repository:

http://plugins.qgis.org/plugins/DiagLeg/

In the past, I submitted a zip folder, but now I have the project in github and I would prefer to point to that source instead. When I tried to update my plugin, it prompt me for the zip again, without giving me any option of switching to the repository. Is there any way I can switch my sources location from zip to github, without creating a new plugin and going through the review process again?

thanks again for your time, and kind regards,
Joana

Hi,

the plugin repository is a repository of zip packages.

If you want to release a new version you must prepare the zip file and upload it to the plugin repository.
