

QGIS Application - Bug report #8142

When deleting >1 column from a PostGIS layer one is always left over

2013-06-24 05:27 AM - Giovanni Manghi

Status:	Closed	
Priority:	Severe/Regression	
Assignee:		
Category:	Data Provider/PostGIS	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution:
Crashes QGIS or corrupts data:		Copied to github as #: 16970
Description		
Add a PostGIS layer table of attributes, toggle editing, click on "delete columns" and select >1 columns to remove.		
After saving edits one of the columns will always show again.		
works ok on 1.8		
Works fine on shapes, didn't tested on SL because deleting columns is not allowed (should be?).
