Easy fix?:	No	**Copied to github as #:**	16983

Description

Sometimes you can run a query that isn't quite correct (even though its syntax is correct and it executes) or you can create a query that simply takes far to long to complete. Or both of these two things at the same time.

It would be useful to have a button that allows you to stop executing the query, similar to that in the Query dialog in pgadmin.

Currently, QGIS just goes into 'Not Responding' mode in Windows. So you either have to wait for the query to finish, or you have to close QGIS down (and subsequently lose the SQL code you have typed).

Of course, I should remember to test all my queries in pgadmin first, but this would still be a good feature to add.

- Easy fix? set to No

#2 - 2018-01-15 12:58 PM - Sylvain M.

I wanted to make the same proposal, but I see that it has already been requested.

So I add this message to indicate that this "stop button" would be very useful in our use of DB Manager.
