Easy fix?:	No	**Copied to github as #:**	17040

Description

We should provide a way (in settings) to export the current settings so they can be exported to another machine or backed up.

This can be handy for backing up you current settings.

This should also reduce the number of questions about moving settings like this one
http://gis.stackexchange.com/questions/57540/can-i-transfer-custom-qgis-settings-from-one-computer-to-another/57543#57543. The answer to that question also contains incorrect information about what can safely moved. As simple as it is to be able to just export the settings from the registry,./config, /Library/, people seem to keep saying it can't be done or you can't do it safely, which of course is incorrect.
