Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	17082

Description

Good morning to all,

I have a project using a postgis layer. When this project is open in QGIs, if I do some changes on the Postgis table, for example with pgAdmin, Qgis crashes.
I am not sure that it is really a crash. Maybe it is more a consequence of a non suitable human comportment.

Thanks a lot for the work you do. I hope I will have some time to spend again in translation next month.

Next version will be a great "millesime" !

Mathieu
