

QGIS Application - Bug report #829

QGIS crashes if more than about 6 files have been moved or renamed

2007-11-22 03:33 PM - gburns -

<b>Status:</b>	Closed	
<b>Priority:</b>	Low	
<b>Assignee:</b>	nobody -	
<b>Category:</b>	Project Loading/Saving	
<b>Affected QGIS version:</b>		<b>Regression?:</b> No
<b>Operating System:</b>	OS X	<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>		<b>Resolution:</b> fixed
<b>Crashes QGIS or corrupts data:</b>		<b>Copied to github as #:</b> 10888
<b>Description</b>		
If there are more than about 6 files that QGIS can't find when it is opening a project, because they have been moved or renamed, it will crash.

Hi

I tried to replicate this by creating a project with 8 or so layers, closing the project, moving the data aside and then reopening the project. I was prompted for each layer and then QGIS continued to function as normal. Can you please verify this issue still exists?

Regards

Tim

Made tests with qgis 1.1/1.2 (linux) and 1.2 (windows xp professional) and I cannot replicate the crashes. Tested up to 11 layers.

I suggest to close this, maybe after testing on Mac OSX, but I doubt this bug is still actual also on this platform.

If I have to make a suggestion I would say that the question

"where is 'XYZ.shp' (original location...)"

is not easy to spot.

See attached file.

- Resolution set to fixed
- Status changed from Open to Closed

Closing, reopen it if necessary.
